TECHNICAL SKILLS

Languages Java (8/17/21), TypeScript, JavaScript, Python, SQL

Backend Spring Boot 2.x/3.x, Spring Security, Spring Data JPA, Hibernate, JWT, REST APIs, Maven

Frontend Next.js 16 (App Router), React, TypeScript, Tailwind, shadcn/ui, TanStack Query, React Hook Form, Zod, Recharts

Architecture DDD, CQRS, Hexagonal, Modular Monolith, SOLID, Clean Code, Event-Driven

Data PostgreSQL, MySQL, MongoDB, Flyway, SQL optimization, indexing, pagination, DTO projections

Cloud & DevOps AWS S3, Docker, Docker Compose, GitHub Actions (CI/CD), Linux, Tomcat

Messaging RabbitMQ, async jobs, Apache Kafka fundamentals

Testing JUnit 5, Mockito, Spring Boot Test, MockMvc, Testcontainers

Tools Git, GitHub, GitFlow, Jira, Confluence, Postman, OpenAPI/Swagger, Scrum

EDUCATION

B.Sc. in Software Engineering
Universidad Peruana de Ciencias Aplicadas (UPC)
In progress · Expected 2026

- Top-Decile recognition for high academic performance.
- Academic emphasis in Software Architecture Fundamentals.

PROFESSIONAL SUMMARY

Junior Full Stack Developer with 4+ years of experience building and maintaining web applications across e-commerce and financial services. I work end-to-end on features using Java 17/21, Spring Boot 3.x, PostgreSQL, Next.js and TypeScript, applying DDD, CQRS and modular architecture prepared to evolve into microservices. Hands-on experience with secure REST APIs (Spring Security + JWT), SQL query optimization, AWS S3 integration, Docker containerization and Python-based process automation. Currently contributing to CorilOne, the Grupo Coril investment-portfolio platform now in controlled production, and to internal solutions for Alfin Banco.

PROFESSIONAL EXPERIENCE

Junior Full Stack Developer

Mar 2025 – Present

Grupo Coril / Alfin Banco · Financial Services · Lima, Peru

CorilOne Platform — Investment Portfolio Management

Sep 2025 – Present

- **End-to-end development** of MVP features (in controlled production) used by financial advisors at Grupo Coril, covering backend, data model, application logic, frontend and functional validation.
- Backend built in **Java 17/21 and Spring Boot 3.x** as a modular monolith following DDD, CQRS and hexagonal architecture, with separate bounded contexts for IAM, Clients, Portfolios, File Ingestion, Reporting and Audit.
- Designed ~40–60 secure REST endpoints with **Spring Security + JWT**, refresh tokens, ADMIN/CLIENT roles, structured validation and centralized exception handling.
- Modeling and optimization on **PostgreSQL** (~30 tables, Flyway migrations, composite indexes, DTO projections); reduced historical-positions query from **~5s to under 1s**.
- Frontend with **Next.js 16 (App Router)**, **TypeScript**, **Tailwind** and **shadcn/ui**, using TanStack Query for server state and Recharts for financial dashboards (allocation by product/currency, balance evolution).
- Integrated **AWS S3** for bulk financial-file uploads and asynchronous processing through **RabbitMQ** (architecture prepared for Kafka on domain events).
- Testing with **JUnit 5**, **Mockito**, **Spring Boot Test** and **Testcontainers**; containerization with Docker/Docker Compose and contributions to GitHub Actions CI/CD pipelines.

Alfin Banco — Treasury (Python Automation)

Nov 2025 – Present

- Designed and built a **Python tool (pandas, openpyxl, logging)** that consolidates and validates inputs for Treasury's regulatory and internal reports.
- Cut the report-preparation time from **~2 hours to ~3 minutes** on a recurring process, removing manual Excel handling and reducing operational risk.

- Coursework: Software Architecture, Databases, Software Engineering, Agile Methodologies.

COMPLEMENTARY TRAINING

- Microservices with Spring Boot and async messaging (Kafka / RabbitMQ).
- DDD and Clean Architecture in enterprise systems.
- Java testing: JUnit 5, Mockito and integration testing.
- Docker and deployment in cloud environments (AWS).
- Full Stack with Next.js, React and TypeScript in production.

LANGUAGES

Spanish Native

English Advanced (C1)

Professional and technical proficiency; technical-documentation reading and communication in development environments.

- Gathered requirements directly with the business area, handled credentials securely (environment variables) and packaged the tool as a distributable executable.

Alfin Banco — Deposit Products (BancaPrime + Scraping)

Mar 2025 – Sep 2025

- Developed the **BancaPrime** landing page (high-net-worth client segment) using **React + Vite, TypeScript, Tailwind, Framer Motion, React Hook Form and Zod**; lead-capture form with validation and notifications to the commercial team.
- Built **Python scrapers (requests, BeautifulSoup, Selenium, pandas)** to consolidate public competitor rates and deposit-product conditions, producing inputs for pricing analysis and commercial benchmarks.

Java Backend Developer — Support & Development

Jan 2022 – Mar 2025

ecomserv · Technology / E-commerce · Lima, Peru

- Maintained and extended REST APIs with **Java 8, Spring Boot 2.x, JPA/Hibernate and MySQL/PostgreSQL** on e-commerce platforms and back-office systems (orders, products, customers, payments).
- Diagnosed and resolved production incidents through log analysis, debugging and database validation; fixed a critical order-status update flow tied to payment-gateway responses.
- Optimized order-listing endpoints with pagination, DTO projections, query refactoring and composite indexes, **cutting response times from ~6–10s to ~1–2s** under high-volume scenarios.
- Integrated external services (payment gateways, email/SMS notifications), supported production deployments and worked with **Maven, Git, Jira** and legacy code in coordination with senior engineers and QA.
